1 Scope

1.1 Identification

This software version description document provides release information for the Common UNIX Printing System ("CUPS") Version 1.1.

1.2 System Overview

CUPS provides a portable printing layer for UNIX®-based operating systems. It has been developed by [Easy Software Products](#) to promote a standard printing solution for all UNIX vendors and users. CUPS provides the System V and Berkeley command-line interfaces.

CUPS uses the Internet Printing Protocol ("IPP") as the basis for managing print jobs and queues. The Line Printer Daemon ("LPD") Server Message Block ("SMB"), and AppSocket (a.k.a. JetDirect) protocols are also supported with reduced functionality. CUPS adds network printer browsing and PostScript Printer Description ("PPD") based printing options to support real-world printing under UNIX.

CUPS also includes a customized version of GNU Ghostscript (currently based off GNU Ghostscript 5.50) and an image file RIP that are used to support non-PostScript printers. Sample drivers for HP and EPSON printers are included that use these filters.

1.3 Document Overview

This software version description document is organized into the following sections:

- [1 – Scope](#)
- [2 – References](#)
- [3 – Additions](#)
- [4 – Changes](#)
- [A – Glossary](#)

2 References

2.1 CUPS Documentation

The following CUPS documentation is referenced by this document:

- CUPS–CMP–1.1: CUPS Configuration Management Plan
- CUPS–IDD–1.1: CUPS System Interface Design Description
- CUPS–IPP–1.1: CUPS Implementation of IPP
- CUPS–SAM–1.1.x: CUPS Software Administrators Manual
- CUPS–SDD–1.1: CUPS Software Design Description
- CUPS–SPM–1.1: CUPS Software Programming Manual
- CUPS–SSR–1.1: CUPS Software Security Report
- CUPS–STP–1.1: CUPS Software Test Plan
- CUPS–SUM–1.1.x: CUPS Software Users Manual
- CUPS–SVD–1.1.x: CUPS Software Version Description

2.2 Other Documents

The following non–CUPS documents are referenced by this document:

- Adobe PostScript Printer Description File Format Specification, Version 4.3.
- Adobe PostScript Language Reference, Third Edition.
- IPP: Job and Printer Set Operations
- IPP/1.1: Encoding and Transport
- IPP/1.1: Implementers Guide
- IPP/1.1: Model and Semantics
- RFC 1179, Line Printer Daemon Protocol
- RFC 2567, Design Goals for an Internet Printing Protocol
- RFC 2568, Rationale for the Structure of the Model and Protocol for the Internet Printing Protocol
- RFC 2569, Mapping between LPD and IPP Protocols
- RFC 2616, Hypertext Transfer Protocol — HTTP/1.1
- RFC 2617, HTTP Authentication: Basic and Digest Access Authentication

3 Additions

CUPS 1.1 includes many new features from the 1.0.x releases.

3.1 Filters

3.1.1 `imageraster`, `imagetops`

The image file filters have been upgraded to support conversion of Microsoft Bitmap ("BMP") files.

3.1.2 `pstoraster`

The `pstoraster` filter has been integrated with GNU GhostScript 5.50. The new RIP supports most Level 3 PostScript language features and much better color management for the sample printer drivers.

3.2 User-Defined Printers and Options

The new `lpoptions` command allows users to configure default document options and create additional "instances" of existing printers, each with unique options.

The `lp`, `lpr`, and `lpstat` commands have been upgraded to use this option and printer instance information automatically.

4 Changes

CUPS 1.1 includes many changes from the 1.0.x releases.

4.1 Directory Structure

The directory structure in CUPS 1.1 has been modified to conform to the Filesystem Hierarchy Standard, 2.0. The following table describes the new file locations.

Table N: Directory structure changes from CUPS 1.0.x to 1.1.x.

Description	CUPS 1.0.x	CUPS 1.1.x
Backends	/var/cups/backend	/usr/lib/cups/backend
CGI programs	/var/cups/cgi-bin	/usr/lib/cups/cgi-bin
Configuration files	/var/cups/conf	/etc/cups
Documentation	/usr/share/cups/doc	/usr/share/doc/cups
Filter programs	/var/cups/filter	/usr/lib/cups/filter
Interface scripts	/var/cups/interfaces	/etc/cups/interfaces
Locale data	/usr/lib/locale	/usr/share/locale
Log files	/var/cups/logs	/var/log/cups
PPD files	/var/cups/ppd	/etc/cups/ppd
Request files	/var/cups/requests	/var/spool/cups

4.2 IPP Implementation

CUPS 1.1 is based on version 1.1 of the Internet Printing Protocol, and implements the `set-job-attributes` extension operation.

Two new CUPS-specific extension operations are provided to determine which devices and printer drivers are available on the system.

The `CUPS-get-printers` and `CUPS-get-classes` operations have been upgraded to support limited filtering based upon the `printer-type`, `printer-location`, `printer-info`, and `printer-make-and-model` attributes.

The `CUPS-add-printer` operation now supports the `ppd-name` attribute to specify a locally-available PPD file rather than sending the PPD file from the client with the request.

Further information on the CUPS implementation of IPP can be found in CUPS-IPP-1.1.

A Glossary

A.1 Terms

<i>C</i>	A computer language.
<i>parallel</i>	Sending or receiving data more than 1 bit at a time.
<i>pipe</i>	A one-way communications channel between two programs.
<i>serial</i>	Sending or receiving data 1 bit at a time.
<i>socket</i>	A two-way network communications channel.

A.2 Acronyms

<i>ASCII</i>	American Standard Code for Information Interchange
<i>CUPS</i>	Common UNIX Printing System
<i>ESC/P</i>	EPSON Standard Code for Printers
<i>FTP</i>	File Transfer Protocol
<i>HP-GL</i>	Hewlett-Packard Graphics Language
<i>HP-PCL</i>	Hewlett-Packard Printer Control Language
<i>HP-PJL</i>	Hewlett-Packard Printer Job Language
<i>IETF</i>	Internet Engineering Task Force
<i>IPP</i>	Internet Printing Protocol
<i>ISO</i>	International Standards Organization
<i>LPD</i>	Line Printer Daemon
<i>MIME</i>	Multimedia Internet Mail Exchange
<i>PCL</i>	Page Control Language
<i>PPD</i>	PostScript Printer Description
<i>SMB</i>	Server Message Block
<i>TFTP</i>	Trivial File Transfer Protocol
